No wonder it's the world's most used tourist pedal tuner. Even though it's not my favorite tuner, I understand why so many people use it. This thing is built like a tank. Metal input jacks, a metal housing, a heavy switch and a durable screen make this, like most Boss pedals, almost indestructible. Reports of these pedals with reliability issues are very rare. I used mine for several years to giggle before moving on to a Korg tone neck. The Korg beats the Boss in my book because of the flow and speed of reading along with being easier to read and being a real bypass. The TU-2 Boss has a buffered bypass circuit, but I've never noticed a big loss of tone when I use it. Eleven small LEDs show the extent to which the guitar is out of tune for the speed and direction of the lights. To the right of the center it is sharp and to the left of the center is flat, using the standard configuration. The streaming counter display is also an option available, although I stick to the normal style. A larger seven-segment LED displays note names and is quite easy to read from afar. The tuning mode and display choice are stored in memory when they are turned off, so there is no need to restore it every time you decide to power the pedal. Tuning modes include chromatic, regular guitar, flat and double flat guitar, regular bass and flat bass, and double bass. Pedal calibration can be set from 438Hz to 445Hz, and the pedal offers the ability to turn off other pedals from its power supply via a daisy chain connected to the top of the pedal. The TU-2 can be turned off by a 9-volt battery or power adapter. The pedal is medium-sized Boss and does not require much space on a pedal board. Overall this pedal is built to handle the road and works very well, but it is only slightly surmounted by the Korg Pitchblack which is in the same price range and has better features and usability. 1 people didn't find this review usefulPage 2 Average score:4.6(4.6/5 based on 73 reviews) 48 reviews66% 13 reviews18% 6 reviews8% Boss TU-2 Color TunerDo after consulting opinions about AF and elsewhere I bought for my PB and it's really easy and convenient. it is mostly very responsive, so the tuning phase is fast, which can be between two since an asset output is turned off during use conveniently. I don't see a better tuner. Boss TU-2 Tuner for what is asked: given accurately and silently I use it for about 7 years in my pedal board Used at the end of the chain on the output silences, suddenly practical tool to change, for example, or mute the sound at the end of a piece The output power is out super convenient, it can power up to 8 pedals with a daisy chain cable I used this solution for a while but we soon reached the limits of the rope (more than 5 pedals around it becomes galley, cable length among others..) Now I drive a vodoo + + lab connecting an output of 200mA that allows me to recover food for others (s) pedals, in addition to the 8 outputs of the vodoo laboratory And I do not feel that it eats sound, unlike others of the same brand A well thought out pedal Boss thank you! 1 in 2 people found this useful boss TU-2 Chromatic TunerAlways review in my pedal board. I only had this pedal tuner, except for a rack but the foot is the most reliable robust and accurate even in the dark. Value for money 9/10 Boss TU-2 Chromatic TunerI has used the top of the pedal board (no loop effects) for many years. I needed a reliable, discreet tuner (i.e. stage use without relief in revolt), silencer bypass mode and robust mission accomplished. Its other: - The second 9V plug (wired/ / on the first), which provides power to the other (s) pedal (s) - A real bypass It is less: - The size and congestion from the advent of great clip-on tuners I would make this choice if clip-on tuners still do not exist. After that, don't lose sight of that this is JUST a tuner, whose best location is parallel to the sound system, and not in series. 1 people found this review useful Boss TU-2 Chromatic TunerImpeccable, the top! 1 people didn't find this useful boss TU-2 Chromatic TunerI review to use it for the six-year coup, and just let go after more than 400 concerts. I didn't try many other tuners, I skipped the reference so much. The feature I like is that it's reliable and has two different releases, and what I like less than a lot of tuners, is that day that you can't see what's there if the sun. The value for money is good, although many other products have since emerged! With experience, even if I had the budget I would buy version 3 (although I am now on another tuner) Boss TU-2 Chromatic TunerI would use it for years about 5 years. I tried any other model, but great fan of Boss and MXR, especially the old school period, if possible 70/80 years I would make this choice because the price is the price of any tuner pedal a little closer, it is perfect live: you can clearly see the ABCDEFG American notes, with diese indicated by a small LED above the letter. Which is perfect compared to the EHX PolyTune from home is that you can have completely twisted tunings, I was in Drop Do diese has a period, since I knew the six notes of my guitar, I could give myself ... I forgot: This is the garment, so robustness, otherwise very precise, qd removed the tuner mode, you can be sure that ca purring in harmony ... 1 in 2 people found this review useful Boss TU-2 Color Tuner4 years old, no other model tested. Accurate value for money, I do it again in the same choice. 1 people didn't find this review useful Boss TU-2 Chromatic TunerI for several years, this pedal is a must have this is not the big cost of super expensive luxury but it is very robust and works very well for both guitars for low tunings (and also more severe than classic EADG tunings). I haven't really tried other models, but but I had a rack a couple of times, I went back to a model pedal because in the end living is much more convenient to have first on a pedal board. I do not intend to change tuner, it is very solid and works very well, this model is a good reputation. If I had to buy one, I'd take this model. 1 people haven't found this useful boss TU-2 Chromatic Tunerused review since 2010. The peculiarity can mute to tune in or pass to give. I don't like being told. 1 people did not find this review useful 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 Summary 21 21
